Rotating Window:	✓
Abacus Plates:	✓
Liana rope set:	✓

Open Slide

A stainless steel slide starting from 2 m high offers an exciting descent that builds balance, spatial awareness, and core strength. Taking turns promotes patience and social awareness.

Access Route with Grips & Rope

Equipped with climbing grips and reinforced rope, this access route develops strength, coordination, and problem-solving. Kids learn to navigate vertical movement while taking turns and supporting one another.

Access Route with Steel Bars

Colorful stainless steel bars challenge children's balance, focus, and body control. The open design encourages anticipation and interaction, adding a social element to physical play.

Top Platform

This transition space connects climbing and sliding. Children pause here to observe, plan, and interact with others. It supports social play and decision-making before continuing the activity flow.

Rotating window

A circular HDPE panel that opens and closes like a window, perfect for imaginative scenarios. It helps children understand visibility, surprise, and simple mechanics.

Abacus Play

HDPE spinning panels on a horizontal bar allow kids to explore motion and patterns. The tactile experience supports motor skills and encourages collaborative or parallel play.

Coloured Window

Transparent polycarbonate panels in bright colors shift children's visual perspective. Looking through them inspires wonder, imaginative play, and shared discoveries.

Liana ropes set

Three sturdy ropes suspend a round HDPE disc beneath the slide platform, creating a playful spot to sit, sway, or gather with friends. Balancing on the seat develops core strength, coordination, and spatial awareness.
